Gallagher hardware default settings

Site access hardware is installed with a set of basic settings ready for use out of the box. The below list outlines these settings and their default configurations. Some settings can be customised by submitting a **Service Request** to the RIW Service Desk.

Additional features are available for organisations that active the Alcolizer or fatigue management options. Customisable features for these add-ons can be viewed through the links below:

- RIW fatigue management hardware configuration options
- RIW Alcolizer hardware configuration options

Gallagher hardware default configuration
